Mr. David B. Mennel  
General Manager  
Aerosmith Fastening Systems  
5530 West Raymond Street  
Indianapolis, IN 46241

Dear Dave,

G-P Gypsum Corporation has reviewed the independent testing data submitted by Aerosmith Fastening Systems for use with DensGlass Gold®. The testing was performed in accordance with ASTM E330 for wall systems constructed with 5/8" and 1/2" DensGlass Gold® using pneumatically driven pins instead of screws. The test result values are suitable for a variety of applications provided the design engineer approves their use for the appropriate negative wind load conditions. As with any fasteners, they shall be installed with the head flush with the surface of the board and countersunk fasteners are unacceptable.

G-P Gypsum Corporation accepts no responsibility or liability for any fastening system, that is the sole responsibility of the fastener manufacturer. G-P Gypsum Corporation does not recommend or warrant any fastening system. The G-P Gypsum Corporation warranty as it pertains to DensGlass Gold® covers the performance of DensGlass Gold® only and does not cover materials manufactured by others.

Sincerely,

*James J. Murphy*
