Proven Fastening Technology

Pin fastening has been commonplace in commercial construction for over 50 years, however, many people still have a hard time understanding how a pin can fasten to steel as securely as a conventional screw fastener. The keys to the performance of the technology are the design of the pin and the driving system. Pins are made of special grades of steel that are hardened with a unique heat treating process, making them ductile and extremely strong. When driven into steel with the proper pneumatic tool, their ballistic-shaped point uniformly pierces the steel instead of drilling it out or tearing it like a common nail. The displaced steel rebounds around the pin to create a strong compressive force on the shank of the fastener. This force, working in conjunction with a specific pin knurling pattern designed for the steel being joined, creates a high friction force that prohibits withdrawal of the fastener from the steel.

Each pin is designed for a specific range of applications, matching unique characteristics and performance capabilities to the materials being fastened. When the proper pins are used in the application they were designed for, their holding strength and durability often surpasses that of screws. Organizations such as the Cold-Formed Steel Engineers Institute (CFSEI) and the Steel Framing Alliance (SFA) support the use of pins as a reliable fastening technology. Call Aerosmith today to learn more about how pin fastening can help you improve productivity and increase profits.

VersaPIN™ Tool
(ST-4200)

Steel Washers

Aerosmith Steel Washers are approved for use with VersaPin and SurePin fastening systems to attach wire lath to steel or concrete. (WF50)

Magnetic Adapter

Adapter is designed to attach to the safety of the ST4200 for use with Aerosmith Steel Washers, (UNM4200)

Air Hose and Fittings

Air hose and fittings are designed exclusively for Aerosmith. Hose is "Extra Flexible" for ease of use, even in cold weather and includes quick disconnect fittings. 1/4" x 50' (ST-2550)

Steel Washers

Round 1.25" diameter steel plate, .023" to .025" thick. "Grip Guard" - Galvalume coated for corrosion protection.
