

# Cellular Shades

parasol® FR Cellular Shades

Parasol FR Cellular Shade fabrics meet all requirements of NFPA 701 small scale flammability testing for commercial applications. There are three fabric types - 3/4" semi opaque, 3/4" opaque and 3/8" semi-opaque. Each fabric type has four colors available - Dune, Marble, Snow and Soft White.

Energy efficient cells are constructed of a permanent flame-resistant textured, non-woven polyester formed into opaque 3/4" and 3/8" hexagonal cells in stacked tubular construction. Each cell is an independent piece of fabric and contains a metallized polyester film core.

Cordless Accu-Rise® (3/4" fabrics only) or clutch operated Continuum™ Continuous Cord Loop System both provide a child safe option. Motorization is the ultimate child safety choice. A fabric covered headrail is standard and conceals the white headrail color.

A variety of shade types are available including Top Down/Bottom Up on Continuum or Accu-Rise or Two Shades on One Headrail for Continuum or Cordlock shades. Other options include: Specialty Shapes, Glissade Vertical Cellular Shades (3/4" only) and Skylight shades.

Parasol FR Cellular Shades are GREENGUARD Gold Certified and have a Lifetime Limited Warranty.
