

## **TATTOO REMOVAL POST TREATMENT INSTRUCTIONS**

- It is common to experience minor discomfort and redness at the treatment site. Pin point bleeding may also occur, but should stop shortly after the treatment
- The discomfort should resolve quickly
- The redness with typically resolve 24-48 hours after treatment. Once the redness has resolved the site will look similar to the way it did prior to treatment
  
- Cover the treated area with antibiotic ointment for 1 week
- The treatment area can be washed normally, but gently
  
- The body will absorb the broken up ink and the area can be retreated in approximately 9 weeks
- Multiple treatments will likely be required to achieve the desired results
